

Underground tanks are long-lasting, easily maintained, and environmentally friendly.

Community tanks serve small and large developments.

They're non-toxic to soil and water.

WITH UNDERGROUND PROPANE TANKS, EVERYONE SEES MORE GREEN.

Propane is clean burning and environmentally friendly, which makes it a popular choice for many green builders. And since propane tanks can be installed underground, it's a hit with homeowners, too. All that's visible above ground is a small dome for refilling, testing and servicing. From the furnace to the cooktop to the water heater to outdoor living areas, propane is a clean, efficient and reliable choice for homeowners off the natural gas main. Dig deeper at usepropane.com.
